Description

OVOCLARYL 1kg

Fining agent which is particularly adapted to reduce and harmonize excess polyphenolic fractions in red wines.

OVOCLARYL is a high quality product derived from pasteurized fresh albumin, presented in powder spray-form. This formulation presents all the technical advantages of fresh egg white, which is used for treating high quality red wines suitable for cellaring.

DOSAGE:

- The dosage is predetermined on the basis of laboratory tests. 6 to 10 g/hL (4 g OVOCLARYL corresponds to 1 fresh egg white).
